

- The **IEEE Journal of Selected Topics in Applied Earth Observations and Remote Sensing** (J-STARS) is a quarterly publication of peer-reviewed papers on a variety of application theme in earth observations and remote sensing.
- Topics can include observations, derived information such as forecast data, simulated information, data assimilation and Earth information techniques to address science and engineering issues of the Earth system.
- The journal is available both on Xplore (under “Selected Topics in Applied Earth Observations and Remote Sensing, IEEE Journal of”) and as hard copy, and has been published since 2008.
- Look for EuroGEOSS papers in 2011 and 2012 issues.
